## Summary

---

Broadly skilled researcher with a strong foundation in computational/software engineering and biological sciences. I have extensive experience developing Genetic Design Automation (GDA) tools and mathematical models for genetic circuit design during my Master's and PhD research. As a postdoc at UCL, I am expanding into advanced machine learning algorithm development—designing custom Gaussian process regression kernels, applying Bayesian inference with VAR regression for time-series analysis, and developing physics-informed neural networks to infer biological system dynamics. I excel in remote, multidisciplinary collaborations.
